PROFILE

Industrial engineer with 4+ years of production SQL on high-volume financial systems (BBVA Technology, DB2 and batch with Control-M). MSc in Data Science, Big Data & Business Analytics (UCM), awarded 1st Prize in the scholarship competition for a thesis in which I designed a 24/7 data capture with 99.7% availability and 12 million records in 92 days. Internship at Babel with Azure Data Factory, SQL Server and Power BI. Three years as Health & Safety Manager, making decisions with data and KPIs, brought me back to tech.

PROFESSIONAL EXPERIENCE

Babel · Junior Data Analyst, BI & Azure Data Factory (Internship) Apr 2026 - Sep 2026

Technology consultancy · Madrid, hybrid · Internship completed

- Solved 3 to 6 data quality issues a day (mislabeled employee records, mismatches between SQL Server and Power BI) to keep corporate reporting reliable.
- Maintained and improved scheduled Azure Data Factory (ADF) pipelines on SQL Server, plus a daily Python job.
- Fixed and evolved Power BI reports, translating business logic between DAX and SQL.
- Flagged the redundant use of two employee keys, one inherited from an obsolete legacy system; the finding led to a development to remove it.

Technologies: Azure Data Factory (ADF), SQL Server, Power BI, DAX, Python.

ARPO Empresa Constructora · Health & Safety Manager May 2024 - Aug 2025

Water supply pipeline renewal for Canal de Isabel II · Madrid

- Coordinated 20+ workers from up to 4 companies across 4 parallel construction sites.
- Cut accidents and incidents by 30% by rolling out action and communication protocols, which led to passing every external safety and quality audit.
- Produced internal reporting for management (technical reports and compliance KPIs) and centralized information across stakeholders: client, contractors and technical team.
- Backed my safety decisions with data on my own initiative, which led me to train in Data Science.

Ibersys Seguridad y Salud · Health & Safety Technician Feb 2023 - Apr 2024

- Coordinated business activities across industrial and energy projects, with structured reports, data validation and document control.

Nidus (Delama & Llorente) · On-site Safety Supervisor Jun 2022 - Dec 2022

- Validated regulatory compliance and managed document control and reporting on construction projects.

BBVA Technology · Backend Developer, Financial Systems Nov 2017 - Jan 2022

Core banking · Madrid · Planned move into industry after completing a Master's in Occupational Health & Safety

- Owned the quality of 3 batch chains with accounting impact (transaction load, processing and reconciliation) in factoring, confirming and revolving, scheduled with Control-M.
- Cut execution and machine time of slow processes by up to 50% by redesigning DB2 tables and SQL logic.
- Handled around 5 user queries a day and 1 to 2 production incidents a week, and delivered on-demand developments for business areas.

Technologies: SQL (DB2), COBOL, JCL, Control-M.

PROJECTS

Delay Prediction for Madrid Commuter Rail · MSc Thesis, 1st Prize (UCM) 2026

Team of 5 · My role: data capture, data architecture, availability, deployment and coordination · github.com/I-Bovingdon

- Designed a 24/7 capture of 3 real-time Renfe feeds every minute, AEMET weather every hour and the official timetable daily: 12 million records in 92 days with 99.7% availability, on a 5 €/month Linux server with systemd services and automatic restart.
- Implemented a medallion-style layered architecture: immutable raw layer in JSON, analytical layer in Parquet, daily cloud backup and data quality monitoring.
- Raised the match rate between real-time data and the official timetable from 0% to 99.9% by recovering historical versions the operator does not keep.
- Deployed the serialized model as a service through a REST API (FastAPI, uvicorn), serving on-demand predictions to a public web application.
- Team result: a LightGBM model that cuts error by 48% (from 283.2 to 147.7 s); with real trains, 6.18 min of error versus 9.08 for the official timetable.

Pump It Up (DrivenData) · ML Pipeline and LLM Agent 2026

- Built an ML pipeline to predict the status of 59,000 water pumps in Tanzania: stacking ensemble scoring 0.8230.
- Doubled detection of the critical class, only 7.3% of the data, which standard models caught 3 times out of 10, using 4 strategies (threshold tuning, two-stage model, cost-sensitive learning and weighted voting); predicted distribution of 6.7% versus 7.3% real.
- Split the pipeline into 3 stages with an artifact contract: the same feature_pipeline.py prepares data for training and prediction, with no gap between what is trained and what is served.
- Added an LLM-based EDA agent (LangGraph, Anthropic API), a Gradio predictor and a conversational assistant to query results in natural language.

Technologies: Python, pandas, scikit-learn, LangGraph, Gradio, Git.

EDUCATION

MSc in Data Science, Big Data & Business Analytics · UCM Oct 2025 - Sep 2026

- 1st Prize in the scholarship competition with the thesis. Applied modules: data engineering, machine learning and model productionization (REST API, Docker, MLOps, CI/CD).

MSc in Occupational Health & Safety · Universidad Francisco de Vitoria 2021 - 2022

- Specializations in Workplace Safety, Industrial Hygiene, and Ergonomics and Applied Psychosociology.

BSc in Industrial Mechanical Engineering · Universidad de Huelva 2011 - 2017

CERTIFICATIONS

- **Databricks Accredited Data Governance Fundamentals** (Databricks Academy, Oct 2026).
- **Databricks Knowledge Badges** (8, Oct 2026): Data Ingestion with Lakeflow Connect, Deploy Workloads with Lakeflow Jobs, Automated Deployment with Declarative Automation Bundles, Build Data Pipelines with Lakeflow Spark Declarative Pipelines, Advanced Techniques with Spark Declarative Pipelines, Performance Optimization, Data Privacy and DevOps Essentials for Data Engineering.
- **Snowflake Platform Skills Badge** (Jul 2026).
- **Big Data Algorithms for Engineering** (Global Knowledge, SEPE program, 80 h, Jul 2026): data mining, R, feature engineering and supervised modeling.
- **In progress:** Databricks Certified Data Engineer Associate.

TECHNICAL SKILLS

- **Work experience:** SQL (DB2, SQL Server), Azure Data Factory, Power BI, DAX, Control-M, COBOL, JCL.
- **Personal projects:** Python (pandas, scikit-learn, LightGBM), FastAPI, REST API, Parquet, Linux, systemd, cron, Git and GitHub, LangGraph.
- **Training:** Databricks, PySpark, Snowflake, Docker, MLOps and CI/CD, R.
- **Languages:** Spanish (native); English B2, fluent technical reading and writing.
