PROFESSIONAL SUMMARY

Junior data engineer with an industrial engineering degree and data at the core of every role I have held. Four years at BBVA Technology working with SQL on DB2, data reconciliation and core banking batch processes. Three years as Health and Safety Manager in construction and industry, producing reports and KPIs for senior management. My return to tech was a planned transition: MSc in Data Science, Big Data and Business Analytics (Complutense University of Madrid), **First Prize in the Master Scholarship Competition for my thesis**, and an internship at Babel with Azure Data Factory, SQL Server and Power BI. Available immediately in Madrid, hybrid or remote.

PROFESSIONAL EXPERIENCE

Data Engineer and BI (Internship) • Babel • Madrid, hybrid Apr 2026 - Sep 2026

- Developed and maintained scheduled ETL pipelines in Azure Data Factory on SQL Server (containerized databases) for internal BI reporting.
- Diagnosed the slowdown of a 3.7M-row daily load (+10 min runtime per month): traced the bottleneck to fact-layer stored procedures and proposed a watermark-based incremental load with MERGE.
- Built Power BI reports with DAX and dimensional modeling, and resolved user tickets by tracing report discrepancies back to their aggregation rules.

Health and Safety Manager • ARPO, Ibersys and Nidus • Madrid Jun 2022 - Aug 2025

- Produced technical reports and compliance KPIs for senior management across construction, water infrastructure, industrial and energy projects, with document control and contractor coordination.
- Held a management role at ARPO with direct reports, reporting to senior management on water supply pipeline renewal works.

Backend and Data Processing Developer • BBVA Technology • Madrid Nov 2017 - Jan 2022

- Queried and managed DB2 databases with millions of records using SQL, running data reconciliation, validation and audit processes across core banking systems.
- Operated and orchestrated batch and online processes with Control-M in high-availability environments, resolving performance incidents with version control (Git) in Agile teams.

FEATURED PROJECT

Madrid Commuter Rail (Cercanías) Delay Prediction • MSc Thesis, UCM 2026

Three-person team. My role: data infrastructure, 24/7 ingestion and web application. First Prize, Master Scholarship Competition.

- Designed and ran a 24/7 ingestion pipeline on Linux (systemd, cron, Bash) capturing three Renfe real-time feeds every minute (REST APIs, GTFS-RT), hourly AEMET weather and the daily official timetable: 12M records in 92 days at 99.7% uptime on a 5 EUR/month server.
- Raised the real-time to timetable join rate from 0% to 99.9% by recovering historical timetable versions the operator does not keep, which made the dataset trainable.
- Implemented a layered architecture (immutable raw JSON to Parquet) with nightly compaction, cloud backup (rclone) and data quality monitoring (nulls, gaps and time anomalies).
- Deployed the LightGBM model as a REST API with FastAPI and uvicorn, consumed by the web app, and integrated a conversational assistant (LangGraph, RAG, Anthropic API) that answers from the real data.
- Team result: the model cuts error from 283.2 to 147.7 s (48% lower); validated on real trains, 6.18 min error versus 9.08 min for the official timetable.

EDUCATION AND CERTIFICATIONS

MSc in Data Science, Big Data and Business Analytics • Complutense University of Madrid 2025 - 2026

First Prize in the Master Scholarship Competition for my thesis.

Databricks Certified Data Engineer Associate • Databricks (in progress) Oct 2026

Microsoft Certified: Azure Fundamentals (AZ-900) • Microsoft (in progress) Oct 2026

Snowflake Platform Skills Badge • Snowflake University Jul 2026

Big Data Algorithms for Engineering (80 h) • Global Knowledge Spain, SEPE program Jul 2026

Data mining, R (tidyverse, data.table), preprocessing, feature engineering and supervised modeling.

MSc in Occupational Health and Safety (three specialties) • Francisco de Vitoria University 2021 - 2022

BEng in Industrial Mechanical Engineering • University of Huelva 2011 - 2017

TECHNICAL SKILLS

Professional use: SQL (SQL Server, DB2), Azure Data Factory, ETL, Power BI, DAX, dimensional modeling, Python, Git, Control-M, batch processing, data reconciliation and data quality, Agile.

Own projects: Python (pandas, PyArrow), Parquet, Linux (Ubuntu), Bash, cron, systemd, REST APIs, FastAPI, uvicorn, LightGBM, scikit-learn, LangGraph, RAG, Anthropic API, rclone.

Training (MSc UCM): Databricks, PySpark, Spark, Snowflake, Docker, CI/CD, MLOps (model deployment, batch and on-demand inference), R.

Languages: Spanish (native) • English B2+ (fluent technical reading and writing).
